

APC7E COIN

White Paper

www.apchecoin.com

Abstract

Blockchain is a secure, transparent and open data processing and storage technology. Blockchain is future technology that we can apply in real life.

High demand of blockchain technology makes all technology developers look to switch to blockchain technology as their technology base. Also banking technology, which has finally begun to adopt blockchain technology.

Currently ApacheCoin is built on the binance smart chain with a total supply of 15,000,000,000 units, Apache token that can be swap, transferred and can be used in various utilities. So all ApacheCoin holders can enjoy blockchain technology in real life.

ApacheCoin blockchain will be built using Waves technology as a development foundation. ApacheCoin will be able to process more than 70,000 transactions per second (TPS) with small hardware requirements and can be expanded to reach 200,000 transactions per second (TPS).

ApacheCoin will give everyone around the world opportunity to become a validator by building nodes and staking.

ApacheCoin will be a gateway between blockchains that is environmentally friendly and has very low transaction costs so that it can be applied in the financial technology of low-economy players.

Introduction

ApacheCoin Development History

Starting from the founder of ApacheCoin in building various financial technologies and being a consultant in several blockchain technologies that are only oriented to trading and collecting project financing funds and not integrated with each other and there is no technology that wants to unite them in one platform.

Every blockchain and crypto project developer mostly relies on and prioritizes trading volume and price increases of their tokens or coins.

That anxiety then prompted ApacheCoin founders to create a technology that could overshadow and encourage application of cryptocurrencies that could be used in real life without having to become a trader.

ApacheCoin founders then created a crypto wallet that accepts various types of coins and tokens to be swap and transacted for daily needs without having to violate government regulations in each country.

Crypto wallet technology is able to raise the value of each coin and token that can be swap and transacted in crypto wallet.

And to be able to apply all the concepts from founder of ApacheCoin, it was sparked to build a blockchain that can be a gateway for many blockchains by prioritizing security, efficiency and openness so that there are no more selfish blockchain developers and crypto projects.

ApacheCoin = Apache Coin

Name of Apache is taken from the name of an HTTP server or web server that is widely used by web technology developers and is one of the favorite servers that can run on various types of operating systems.

Founders of ApacheCoin used this philosophy so that ApacheCoin can be a gateway and run on multiple blockchains so that every existing blockchain can be connected without having to build a bridge between them.

ApacheCoin Identity :

- Name : ApacheCoin
- Ticker : APCHE
- Network : Binance Smart Chain
- Amount of Supply : 15.000.000.000
- Decimal : 8
- Tax Fee : 0%

Main Project

We will build various technologies that can be used both for ApacheCoin and for other coins or tokens.

- Crypto wallet, can be used to swap coins and tokens into fiat currency and then transacted for various digital products and electronic money;
- Social Network, can be used to interact with various communities and will benefit from the share to earn program (Airdrop);
- Privat wallet, can be used for staking and farming to get more benefits as a token holder;
- Travel Online Platform, ApacheCoin will be used to book flights, trains, hotels and playgrounds;
- Payment gateway / aggregator to be used by other parties to be able to connect with banking;
- White lable wallet that can be used by middle to lower economic actors to support their business and are connected to banks;
- Blockchain Next Generation, as a future blockchain that can be directly connected to several other blockchains and can be implemented with hybrid technology;
- Decentralize Exchange (DEX), a crypto exchange that does not require a liquidity pool and uses the concept of peer to peer so that it is more open.

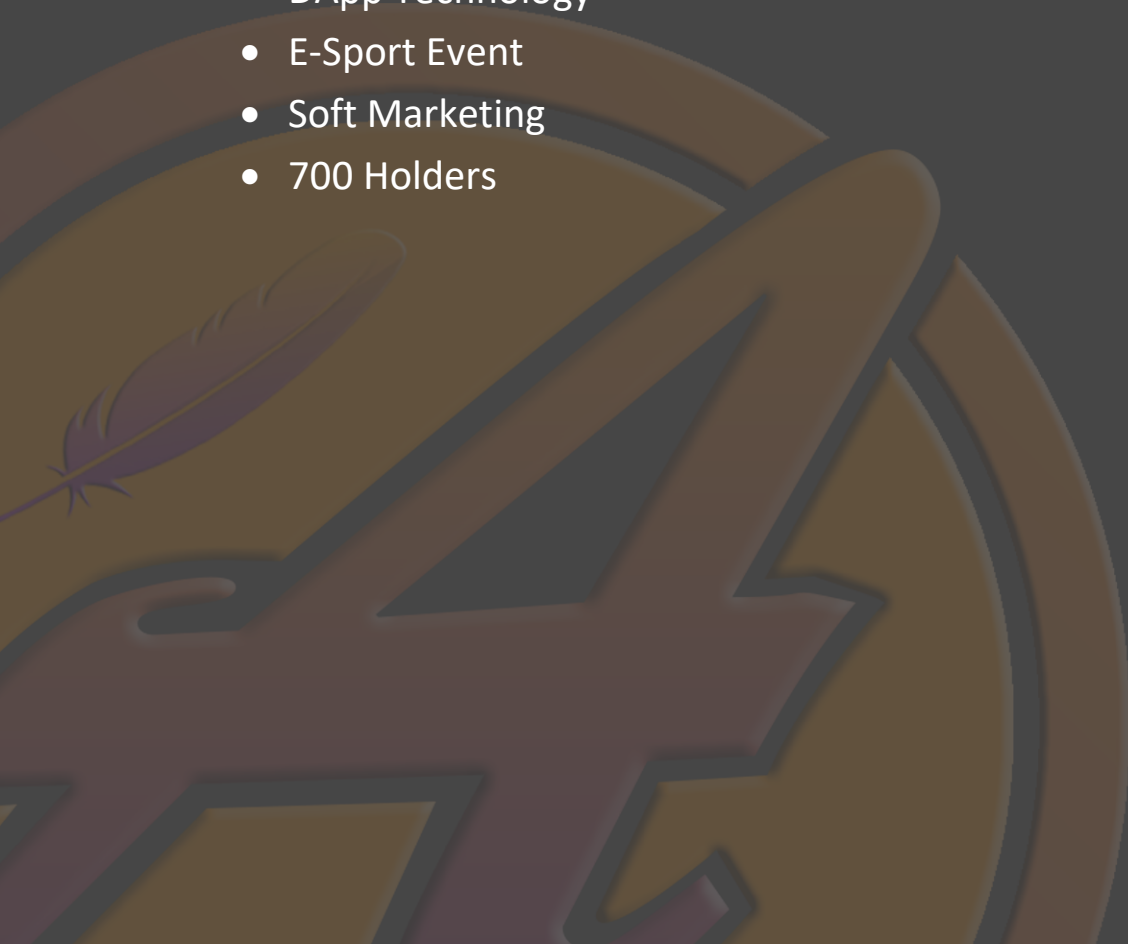

Roadmap

Stage 1 (Quarter 3 - 2022)

- Launce Website
- Launce Walet Kripto
- Presale
- Dex Listing
- Privat Wallet
- Yield Farming Launched
- Smart Contract Audit
- 300 Holders

Stage 2 (Quarter 4 - 2022)

- Coin Gecko Listing
- Coin Market Cap Listing
- DApp Technology
- E-Sport Event
- Soft Marketing
- 700 Holders

Stage 3 (Quarter 1 - 2023)

- Social Media Launched (s2e)
- Community Event
- CEX Listing
- Travel Online Platform
- E-Sport Event
- Legality
- Global Market
- Aggregator
- White Lable Wallet
- 3.000 Holders

Stage 4 (Quarter 2 - 2023)

- International Event
- Global Partnership
- E-Sprot Event
- Blockchain Testnet
- International Holder Event
- 7.000 Holdes

Tokenomic

Tokenomic ApacheCoin :

- 1 % Privat Sale
- 35 % Presale
- 20 % Pancake Swap Liquidity
- 4 % Marketing
- 7 % Developer
- 15 % Project Development
- 15 % Centralize Exchange
- 3 % Airdrop
